Model descriptions

All models here use a recoded DV with the following categories: 0=0, 1=1, 2=everything else (2-6). Explanation of model labels where we use all of the data:

- model1a1 v2: new p5 var a la prorok (p5 countries get a score of 0)
- model1a1 v3: new p5 var a la prorok with fix to allow for leaping buildings in a single bound (p5 countries get a score of 0)

For each of the models presented we present results using global and category specific covariate effects. Category specific covariate effects are calculated for: Africa, OSV, and affinity scores.
