# 1 Model descriptions

All models here use a recoded DV with the following categories: 0=0, 1=1, 2=everything else (2-6). Explanation of model labels where we use all of the data:

- model 1a all cases: icclevel opp 3, icclevel state 3
- model 1a where icc ratification = 1: icclevel opp 3, icclevel state 3
- model 1a where pts<3 and civilwar=1: all cases: icclevel opp 3, icclevel state 3

For each of the models presented we present results using global and category specific covariate effects. Category specific covariate effects are calculated for: Africa, OSV, and affinity scores.
