1 Model descriptions

All models here use a recoded DV with the following categories: 0=0, 1=1, 2=everything else (2-6). Explanation of model labels where we use all of the data:

- model 1a1: category specific effects for p5 binary in state models. no p5 control in rebel models.
- modell1a1 v2: new p5 var a la prorok (p5 countries get a score of 0)

For each of the models presented we present results using global and category specific covariate effects. Category specific covariate effects are calculated for: Africa, OSV, and affinity scores.
