## Model descriptions

All models here use a recoded DV with the following categories: 0=0, 1=1, 2=everything else (2-6). Explanation of model labels where we use all of the data:

- model 1a all cases: icclevel opp 3, icclevel state 3
- model 1a where pts $\geq$ 3 OR civilwar=1 post 2002: icclevel opp 3, icclevel state 3
- model 1a interaction between icc rat and osv: icclevel opp 3, icclevel state 3

For each of the models presented we present results using global and category specific covariate effects. Category specific covariate effects are calculated for: Africa, OSV, and affinity scores.

# 1 Model 1a

## 1.1 Global Covariate Effects
